

OSG - Oran Safety Glass

Tempered Glass Sidelite

Oran Safety Glass

Technological Sophistication

Determined to remain at the technological forefront in automotive glass production and to meet emerging market trends, Oran is now producing for the ARG market flat and curved tempered glass, including a full range of bus, passenger car and tractor sidelite. Production centers around Oran's extensive knowledge in controlling heating and cooling processes to achieve the precise level of mechanical and thermal stress and a recently acquired Tamglass' HTBS ProE tempering and bending system.

As Israel's leading glass producer Oran has proved through the years that it is totally committed to client interests and that it has the know-how to meet their needs no matter how complex product specifications or how tight the schedule. Offering customers a complete in-house production capability of both tempered and laminated glass, flat and curved, Oran is now exporting more than 50% of its production to leading ARG suppliers. Fabricating both short and long series, Oran's success in fulfilling client requirements has developed into many close strategic relationships.

As market demands for windshields and tempered sidelite become more complicated, Oran's customers know that the company's technological emphasis on its quality control and its extensive knowledge of processes and machinery can precisely and cost-efficiently create the superior product that their customers expect.

Superior Quality

To ensure that products are consistently high quality, Oran maintains a full range of laboratory testing facilities. All of Oran's products comply with international standards and the British Standards Institute SA and SII audit the company on a regular basis. The plant also adheres to ISO 9000-2000 and ISO 14,000. Alongside a full production capability and its zero defect quality assurance policy, Oran is committed to working closely with customers, providing a high level of service and a rapid response to queries.
